

# Python - Assignment

①

A1      { empty-dict = {}  
                 # code here.  
                 }

A2      42

A3      key-value pair  
         Dictionary have a value to every  
A4      every key.

A list is just a collection.

A4      Key not found error

A5      Both refers to same, key 'cat'  
         in spam.

A6      ⇒ 'cat' this refers to the keys in  
         dictionary and checks for same

⇒ ~~cat~~ spam.values cat refers to the  
         value cat in dictionary.

A7

spam.setdefault('color', 'black')

A8

pprint module is used for  
this.
